Case study: Harefield Hospital Changing places project

- Client: NHS
- Project value: £106k
- Duration 8 weeks

The Changing places campaign is a group of organisations that aims to have these facilities installed into very large public venues so anyone regardless of their access needs or disability can use the facility.

This was a much needed facility for the hospital as there was no accessibility toilet at the time, the ambulant user toilet would facilitate the users of the hospital café which prior to the construction meant having to use the WC facilities in the main hospital building which was far from ideal for them.

The space was previously a cleaning staff changing area and to enable construction the area was re-configured to form the changing places toilet and an ambient user toilet. The works were delivered to a very high standard, on time and on budget.

Images show Astor Bannerman height adjustable wash hand basin, Trovex hygienic wall cladding installed by Goss Environment coatings, Forbo sure step non-slip floor covering, Ocura mobile folding screen.

Images show, Astor Bannerman height adjustable changing bench, level access shower area with mixer shower, Arjo Maxi Sky ECS hoist, raised height WC suite with Hewi grab rails and drop down rails supplied by Neville Lumb.

Image above show, Hygienic wheel chair access bi-fold door set with Rada lock by Principle doors, radiant ceiling panels and Ecophon suspended ceiling and nurses call point on right is the ambulant user WC.
